Lexical Conventions

- 1. Comments are surrounded by { and }. They may not contain a {. Comments may appear after any token.
- 2. Blanks between tokens are optional.
- 3. Token **id** for identifiers matches a letter followed by letter or digits:

```
letter -> [a-zA-Z]
digit -> [0-9]
id -> letter (letter | digit)*
```

The * indicates that the choice in the parentheses may be made as many times as you wish.

1. Token **num** matches numbers as follows:

```
digits -> digit digit* optional_fraction -> . digits | \lambda optional_exponent -> (E (+ | - | \lambda) digits) | \lambda num -> digits optional_fraction optional_exponent
```

- 2. Keywords are reserved.
- 3. The relational operators (**relop**'s) are:

- 4. The **addop**'s are +, -, and **or**.
- 5. The mulop's are *, /, div, mod, and and.
- 6. The lexeme for token **assignop** is **:=**.
